Change Log

The Software Requirement Specification had been prepared keeping the Object Oriented Concepts in mind. But unfortunately due to lack of experience and distribution of time, it had not been possible to follow the Software Requirement Specification and Analysis document as it has been promised. But all of the proposed requirements has been implemented to fulfill the Quality Focus Deployment of the project except the submission of code in java. We feel sorry for not fulfilling this requirement as it had been promised.

But we have provided a feature called Upcoming Contests which will be showed to all users of the Platform along with the administrative user though it had not been promised.
